

CHIP COLLINS MAGLASANG

AI Engineer / Full-Stack Developer

Yati, Liloan, Cebu | 09398975547 | collinsgt12374@gmail.com | chipcollinsmaglasang.vercel.app | github.com/Kolenss

SUMMARY

Full-Stack and AI Engineer with hands-on experience building AI voice agents, LLM-powered systems, and full-stack web applications, and deploying them to production. Proficient in React, Next.js, TypeScript, Python, Node.js, Supabase, and PostgreSQL, with working experience across the OpenAI Agents SDK, Claude API, and LangChain. Comfortable owning the full lifecycle: development, testing, Linux server deployment, Cloudflare, HTTPS, and security hardening. Bachelor of Science in Computer Engineering, Cebu Technological University.

INTERNSHIP EXPERIENCE

OneTouch Networks

February - April 2026

AI Developer / Full-Stack Developer

- Built and owned AILEEN, an AI-powered outbound calling and lead generation platform for a US financial advisory firm, covering lead discovery, document classification, the voice agent, and the calling dashboard
- Developed AI voice agents using the OpenAI Agents SDK and Twilio (Voice and SMS) for automated, human-like phone conversations, including voicemail detection and call-state handling
- Automated lead sourcing from Google Maps and retrieval/classification of US Department of Labor Form 5500 filings to identify qualified prospects
- Collaborated on OneTouch CRM, a self-hosted Salesforce replacement built on Twenty: implemented role-based access control, in-app notifications, multi-assignee team chat, and record sharing and search, with Docker and Railway deployment (React, TypeScript, NestJS, GraphQL, PostgreSQL, Redis)
- Built retrieval-augmented generation (RAG) pipelines with LangChain and vector embeddings during AI training

Right Apps Inc.

June - August 2025

Frontend Developer

- Built reusable Next.js components and responsive layouts, translating UI/UX designs into functional frontend interfaces in collaboration with design and dev teams

PROJECTS

Production Web Platform

Solo Developer and Operator

- Provisioned and hardened an Ubuntu server on DigitalOcean (keys-only SSH, ufw firewall, fail2ban, automatic updates) and served the site over HTTPS with Caddy and Let's Encrypt, with DNS and a one-command deploy pipeline
- Performed security audits: scanned git history and client-served files for exposed secrets, and hardened the deploy pipeline so version-control and internal files never reach the public web root
- Designed an authentication and subscriptions architecture using Supabase Auth, PostgreSQL Row-Level Security, and signature-verified Stripe webhooks
- Built a server-side data pipeline with Supabase Edge Functions and Python sync scripts, ingesting live odds from external APIs across 6 sports and upserting into tier-gated Supabase tables on a cron schedule
- Implemented technical SEO: meta titles and descriptions, Open Graph tags, sitemaps, robots directives, and structured content

Spotter

FMCSA Trip Planner (Django + React + TypeScript)

- Built a full-stack hours-of-service trip planner encoding US federal trucking regulations (49 CFR Part 395) into a rules engine, with truck-legal routing, interactive route maps, and generated DOT log sheets
- Shipped with 174 passing automated tests (pytest); integrated OpenRouteService, OSRM, Nominatim, and OpenStreetMap APIs

Evergreen

IoT Avocado Freshness Detection System (Capstone)

- Built an IoT fruit freshness detection system using sensors, Bluetooth, and Python-based machine learning, with a React Native mobile app and real-time dashboard for live readings and shelf-life estimates

TECHNICAL SKILLS

AI and LLM: OpenAI API and Agents SDK, Claude API, Gemini API, LangChain (RAG, Vector Embeddings), MCP, Prompt Engineering, Conversational AI, Voice AI

Frontend: HTML, CSS, Tailwind CSS, JavaScript, TypeScript, React, Next.js, Vite, Responsive Design, UI/UX

Backend: Python, Django, FastAPI, Node.js, NestJS, RESTful APIs, GraphQL, SQL, PostgreSQL, Supabase (Auth, RLS, Edge Functions), Redis, JWT Authentication

Mobile: React Native, Expo, TypeScript, JavaScript

DevOps and Cloud: Docker, Linux (Ubuntu) Server Administration and Hardening, SSH, Caddy, Cloudflare (DNS, WAF, CDN), HTTPS/TLS (Let's Encrypt), CI/CD (GitHub Actions), DigitalOcean, Railway, Netlify, Vercel, Git/GitHub

Automation and Integrations: n8n, Workflow Automation, Webhooks, Twilio (Voice and SMS), Stripe (Payments, Webhooks)

SEO and Testing: Technical SEO (Meta Tags, Sitemaps, Robots, Open Graph), AI Search Optimization (GEO), pytest, Regression Testing

EDUCATION

Cebu Technological University - Danao Campus
Bachelor of Science in Computer Engineering

2022 - 2026 (Graduated)
