

CHIP COLLINS MAGLASANG

AI Engineer / Full-Stack Developer

Yati, Liloan, Cebu | 09398975547 | collinsgt12374@gmail.com | chipcollinsmaglasang.vercel.app | github.com/Kolenss

SUMMARY

Full-Stack and AI Engineer with hands-on experience building AI voice agents, LLM-powered systems, and full-stack web applications. Proficient in Next.js, React, TypeScript, FastAPI, Node.js, Supabase, and the OpenAI Agents SDK. Experienced in prompt engineering, conversational AI architecture, RESTful API integration, and responsive frontend development. Graduated with a Bachelor of Science in Computer Engineering from Cebu Technological University.

INTERNSHIP EXPERIENCE

OneTouch Networks February - April 2026

AI Developer / Full-Stack Developer

- Built AI voice agents using OpenAI Agents SDK and LLMs for automated, human-like conversational systems
- Integrated real-time voice communication workflows connecting user inputs to AI-driven response pipelines
- Architected end-to-end full-stack systems linking frontend interfaces, backend APIs, and AI services
- Optimized prompt structures and response handling to improve AI accuracy and conversation consistency
- Built OneTouch CRM on Twenty, a self-hosted AI-first CRM replacing the company's Salesforce subscription
- Implemented role-based access control, in-app notifications, and record sharing across CRM records
- Developed team group chat with multiple assignees, plus record search and duplication
- Set up Docker and Railway deployment for the React, TypeScript, NestJS, GraphQL, PostgreSQL, and Redis stack

Right Apps Inc. June - August 2025

Frontend Developer

- Built reusable Next.js components to support scalable and maintainable web application development
- Implemented responsive layouts ensuring cross-device compatibility across screen sizes
- Translated UI/UX designs into functional frontend interfaces in collaboration with design and dev teams

PROJECTS

Evergreen - IoT Avocado Freshness Detection System Capstone Project

- Built an IoT fruit freshness detection system using sensors, Bluetooth, and Python-based machine learning
- Developed a real-time dashboard displaying live sensor readings, freshness classification, and shelf-life estimates
- Integrated mobile app with hardware devices for end-to-end data collection and predictive analytics

TECHNICAL SKILLS

AI and LLM: OpenAI Agents SDK, LLM Integration, Prompt Engineering, Conversational AI, Voice AI

Frontend: HTML, CSS, Tailwind CSS, JavaScript, TypeScript, React, Next.js, Responsive Design, UI/UX

Backend: Python, FastAPI, Node.js, NestJS, RESTful API, GraphQL, SQL, PostgreSQL, Supabase, Redis, Database Management

Mobile: React Native, TypeScript, JavaScript, Expo

DevOps and Automation: Docker, n8n, Workflow Automation, Webhooks, API Integrations

Tools: Vite, Twilio (Voice and SMS APIs), Supabase, Serper, NGROK, GitHub, Machine Learning using Python

EDUCATION

Cebu Technological University - Danao Campus 2022 - 2026 (Graduated)

Bachelor of Science in Computer Engineering

University of Cebu Senior High School - Banilad Campus 2020 - 2022

Senior High School - STEM Strand
